

## **Communications Facilities Installed by Contractors**

**Summary/Purpose:** Defines the policy of the Telecommunications Center regarding installation of communications facilities by contractors.

Communication facilities installed by contractors must meet specifications and guidelines established by the University Telecommunications Center. The specifications are available for viewing and printing at the following link;

<http://www.olemiss.edu/depts/telecommunications/specification.html>

The Telecommunications Center will not accept materials, equipment or workmanship that does not meet the specifications and guidelines contained in the above referenced document. Facilities or equipment will not be connected to the telephone switch, network equipment or cable television system until the contractor has tested and documented all components of the installation.

If facilities fail to meet standards, the contractor will be responsible for making the necessary corrections and providing documentation, at no cost to the University, that the facilities have been corrected to meet standards.

Contractors should periodically check the web site for updated information.
