

To prevent potential damage to **ALL trees in ALL locations** on campus, no enos, hammocks, slacklines and/or tether lines are allowed in trees. Nothing can be tied, hung or wrapped around trees on campus. When enos, hammocks, slacklines and/or tether lines are tied, hung or wrapped around tree trunks or limbs they weaken, crack and wear away bark which renders infestation and disease. It may also lacerate tree trunks and branches which increases the risk for potential failure.
